PROFESSIONAL SUMMARY

Results-driven DevOps / Implementation Engineer with over 2 years of experience operating and troubleshooting production telecom mediation platforms on AWS EKS and Kubernetes. Proven expertise in GitOps-based deployments using ArgoCD, Jenkins CI/CD pipelines, AWS ECR image management, and shell/Python automation for monitoring, alerting, and backup workflows. Actively expanding technical proficiency in Python, Data Structures & Algorithms, and AI/ML pipeline integration to transition into a full-stack DevOps and Software Development role.

TECHNICAL SKILLS

Programming Languages: Python, C, Shell Scripting

Container & Orchestration: Kubernetes, AWS EKS, Docker, ArgoCD (GitOps)

DevOps & Cloud Tools: Jenkins CI/CD, AWS (EKS, ECR, S3), Git, Linux Administration

Core Competencies: Basic Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), CI/CD Pipeline Design, Production Troubleshooting, System Monitoring & Automation

Creative & Multimedia Tools: Digital Audio Workstations (DAWs), Video Editing Software, Blender 3D, Audio-Visual Production

PROFESSIONAL EXPERIENCE

Implementation / DevOps Engineer

Sep *2024 – Present*

6D Technologies Pvt Ltd | Bengaluru, India

- Operate and troubleshoot Kubernetes workloads on AWS EKS for production telecom mediation platforms, resolving pod, ConfigMap, and service-level failures to maintain high availability.
- Implement GitOps-based continuous deployment using ArgoCD, managing application rollouts and configuration consistency across multiple environments.
- Configured, maintained, and optimized Jenkins CI/CD automation pipelines, reducing manual deployment overhead.
- Managed containerized application workflows using AWS Elastic Container Registry (ECR) for secure image tagging, retagging, and cross-environment synchronization.
- Built automated AWS S3 backup pipelines for CDR (Call Detail Record) data and application logs, improving data retention and recovery reliability.
- Developed shell-based monitoring and alerting scripts (system resource, credential expiry, integration health) to proactively detect production issues.
- Authored customer-facing technical documentation and troubleshooting guides, and partnered with cross-functional teams to resolve deployment bottlenecks.

Information Technology System Administrator

Nov *2023* – **April** *2024*

Kriya NextWealth Private Limited | Mysuru, India

- Provided comprehensive remote and on-site IT support, troubleshooting hardware, software, operating systems, and network connectivity issues for 100+ users.
- Installed, configured, and maintained critical business applications and VPN tools supporting BPO operations for major global clients, including Walmart and Tesco.
- Managed endpoint security and user access controls, ensuring the integrity and security of company workstations and sensitive client data.
- Administered application and software servers, performing regular health checks, troubleshooting, and preventive maintenance to ensure 99.9% uptime.
- Monitored and resolved complex network issues involving routers, Wi-Fi, and LAN infrastructure to minimize business disruptions.
- Streamlined employee onboarding by preparing workstations with required software, VPN configurations, and secure access permissions.
- Maintained detailed IT infrastructure documentation and strictly enforced company security and access-control policies.
- Collaborated with cross-functional teams and external service providers to resolve technical bottlenecks and maintain seamless IT operations.

EDUCATION

Full-stack Developer Intern
JSpiders - Training & Development Center, Mysore, Karnataka, India
Bachelor of Engineering (B.E.), Electronics and Communication Engineering (ECE)
MIT Mysore, Affiliated with VTU | Mysuru, India

KEY PROJECTS

Automated CI/CD Container Deployment Pipeline

- Architected an end-to-end deployment workflow using Jenkins and AWS ECR to streamline container updates.
- Wrote custom shell/Python automation scripts for image tagging, retagging, and status monitoring.

Kubernetes Health-Check & Alerting Script Suite

- Built a suite of Kubernetes-based monitoring/alerting scripts with a shared reusable shell library; diagnosed and resolved SMTP delivery failures affecting alert reliability.

Python System Monitoring Automation Tool

- Built a lightweight CLI application in Python to read system performance metrics, aggregate resource usage logs, and output structured JSON summaries.

CERTIFICATIONS & CONTINUOUS LEARNING

- Advanced Python Programming & Data Structures — Coursework
- AWS & DevOps Architecture Foundations — Cisco Networking Academy / Udemy / AWS
- GCP complete cloud courses — Google Skills boost
- Python Full Stack Engineer — JSpiders
